Hiring Manager

[Company Name]

[Company Address]

Dear Hiring Manager,

I'm writing to apply for the Mid-Level Software Developer position at [Company Name]. Over the past five years I've built backend systems and user-facing applications for B2B and B2C products using Java, Spring Boot, and modern front-end frameworks. I enjoy solving problems end-to-end: designing APIs, implementing reliable microservices, and shipping intuitive UIs. I'm excited by [Company Name]'s focus on [insert a short company interest — e.g., scalable SaaS products / enterprise workflow automation], and I'd love to bring my pragmatic engineering approach and teamwork skills to your team.

In my current role at Nimbus Solutions I helped redesign a monolithic order-processing system into a set of Spring Boot microservices, improving throughput by 40% and reducing mean time to deploy by introducing containerization and a CI/CD pipeline. I also led the integration of a workflow engine into our core product — defining end-to-end APIs, writing integration tests, and collaborating with product owners to ensure behavior matched business needs. On the front end, I've built customer dashboards with React and worked with component libraries such as PrimeFaces on internal Java EE apps.

What I bring to the table:

- Reliable, test-driven development in Java and Spring ecosystems.
- Practical experience with containers (Docker), CI/CD, and cloud deployments (AWS).
- Strong collaboration skills — I've worked closely with product managers, QA, DevOps and UX designers to deliver features with measurable business impact.
- A curious mindset: I pick up new tools quickly and share knowledge through code reviews and brown-bag sessions.

I'd welcome the opportunity to discuss how my background and approach map to your team's current needs. Thank you for considering my application — I look forward to speaking with you.

Sincerely,

Alex Meyer
